EDUCATION

University of Dhaka- Institute of Information Technology **Dhaka,Bangladesh**
Bachelor of Science in Software Engineering - CGPA: 3.23/4.00 Expected Graduation, September 2026

PROJECTS

Study Sync (MERN Stack + AWS S3) **Jan 2025 - March 2025**

- Built a MERN-based group study app with real-time chat, file sharing, and notifications.
- Used AWS S3 for file storage and Socket.io for live messaging and updates.

MiniChess (Python) **May 2025 - June 2025**

- Developed a 5x6 MinChess engine with Alpha-Beta pruning, move ordering, and quiescence search.
- Implemented transposition tables for faster decision-making and efficient state evaluation.

CodeBlog API (Spring Boot + PostgreSQL) **April 2026**

- Developed a RESTful blogging API with authentication, posts, and comment management.
- Structured the backend using a package-by-feature architecture (auth, posts, comments) for modularity and maintainability.
- Designed layered services and controllers with clean separation of concerns and secure API handling.

Garments Inventory System (Express.js + PostgreSQL + Redis + Docker) **Jan 2026**

- Built a backend system for inventory, order processing, and product management with role-based user access.
- Implemented session-based authentication using Redis and optimized data handling with raw SQL (no ORM).
- Containerized the application with Docker and added Jest-based testing for reliable API behavior.

EXPERIENCE

Oct 2025 - March 2026

Software Developer Intern (Tech Intern)
Tekarsh Bangladesh Limited | 6 months

- Contributed to a scholarship management system (role-based education dashboard), fixing bugs, refactoring code, and extending features such as analytics and student pages in an Agile environment.
- Performed large-scale load testing on a restaurant management system to evaluate API performance under concurrent users, identifying bottlenecks through response time and throughput analysis.
- Developed automated smoke tests using Appium and WebdriverIO for a mobile application, ensuring reliability of critical user flows and backend APIs.

SKILLS

- **Languages:** C, Java, JavaScript, Python
- **Databases:** MongoDB, PostgreSQL
- **Web Technologies:** Next.js, React, Node.js, Express.js, Tailwind CSS, HTML
- **Tools:** Git, GitHub, Docker, Nginx, Postman, Linux, VS Code, IntelliJ
- **Concepts:** RESTful APIs, WebSockets, Object-Oriented Programming
